

Zulu Mat™
Register Seal

STOP THE LEAKS

Gaps between the sheet metal register can and drywall are a common cause of duct leakage

Reduce Duct System Leakage by up to **15%**!

Installing Zulu Mat™ Improves:

- Energy Savings
- Humidity Control
- Indoor Air Quality
- Odor Control

Installed Between Air Register & Wall,
Zulu Mat Stops Leakage!

THE PROBLEM

Air leakage between drywall and ductwork

- There is a gap between the ductwork supply can and drywall (see picture on left), where conditioned air leaks into attics, walls, or basements. Basically, you are paying to heat or cool spaces that don't need to be conditioned.
- As much as 15% of the air that should be heating or cooling your home can leak into what should be 'unconditioned' spaces.
- If registers / vents are 'closed off', then even more air is being leaked into those unconditioned spaces.
- When the air conditioning or heating system is turned off, dirty - and unconditioned - air leaks into the living spaces through this same gap (see illustration).
- In areas with high humidity, humid air can leak into the conditioned (drier) living space, causing mold around the air register.

With Zulu Mat™ Register Seal installed

WHAT ZULU MAT DOES

A Qualified Zulu Mat Dealer will Measure the Register Sizes in Your Home, and Install Zulu Mats to Seal the Gap.

- Made of a pliable, cross linked polyethylene foam, Zulu Mat is installed between the air register and wall, and seals the gap (see illustration).
- Zulu Mat is a permanent solution to this all too common leakage problem - the air register can be removed and replaced for painting or duct cleaning, while still maintaining an air tight seal!

Energy Savings!

Zulu Mat will reduce your energy bills by stopping the leakage of costly conditioned air into spaces that don't need to be conditioned.

Improve Indoor Air Quality!

By preventing dirty, humid, unconditioned air from leaking into the living space, Zulu Mat improves indoor air quality, and prevents unsightly dirty marks around the air register.
